## Flu, RSV, & CoV-2 Trends

This report contains results for molecular and antigen tests ordered throughout the CHMCA network and performed at the Akron/Mahoning Valley laboratories. It also includes Point-of-Care tests (POCT) for influenza and SARS-CoV-2 (as of 2/2020) performed at ACHP locations.

Notes on Influenza A subtyping: Influenza A found by the Respiratory Film Array test will also include a subtype. Influenza A found by POCT methods will be listed as “no subtype”.

Notes on SARS-CoV-2 data: In the top chart, the red CoV-2 line traces the total number of patients testing positive each week. In the bottom chart, the orange line (“PUI”) shows data for all patients with symptoms or known exposures (“Patient Under Investigation”) while the purple line (“Surv.”) shows surveillance data for undergoing pre-procedure screening.

As of 10/2021, the surveillance line shows patients who have been designated as “pre-procedure” in their testing order questionnaire, as well as participants in the employee screening program. In 9/2022 the employee screening program was ended and pre-procedure screening was at provider-discretion.
